

Finally.

**A better way to protect
your stone from etching.**

MARBLE RESTORATION

Marble is one of the most elegant surface types you can have in your home or commercial space. It's cool and bright, it's extremely popular, and goes with any décor.

The challenge is maintenance. Until now!

Did you know...

Acid-sensitive stones like marble, limestone, travertine, and onyx are prone to etching. When acidic substances come in contact with these stone types, the acid actually begins to eat away at the surface, which creates dull spots known as "etching." An etch is not a stain and cannot be prevented by using even the best penetrating stone sealer.

Everyday items that you use in your kitchen, such as lemons, vinegar, coffee, wine, and soda or in your bathroom, like toothpaste, certain cleaners, and lotions can quickly cause an etch mark. While it's certainly possible to repair etches, the process can be labor intensive and expensive. But, most important-ly, the repair does not protect against future etching.

So, should you use marble as your countertop surface?

Absolutely!

Introducing MORE™ AntiEtch™

MORE™ AntiEtch™ will stop etching and staining caused by acidic foods and liquids. This innovative solution forms a durable, ultra-low visibility, super-thin coating that prevents the toughest stains and caustic solutions from coming in contact with your marble countertop surface.

With MORE™ AntiEtch™ you can enjoy your marble with MORE™ peace of mind and freedom. Go ahead, have the family over!

Residential. Commercial. Hospitality. Institutional.

MORE™ AntiEtch™, like all MORE™ products, comes with the MORE™ promise...

Safe. Simple. Effective.

Features and benefits of MORE™ AntiEtch™ :

- Stops acid-etching
- Stops staining
- Crystal clear finish
- Can be applied on marble, limestone, onyx, travertine, and concrete
- Available in honed, polished, and leathered finishes
- Can be applied to vertical and horizontal surfaces
- Low odor during application
- Environmentally friendly
- Safe on food grade surfaces
- Zero porosity - germs and bacteria have nowhere to grow
- Will not crack or peel
- Easy to maintain
- Easily repairable
- Durable – 10 year expected wear
